

A family affair, this home was designed by husband-and-wife architects Molly and Robb Olson and built by Molly's father, Bruce Olson.

EVOKING THE ERA OF GRAND PARK LODGES

This rustic, classic Tahoe home was designed by husband-and-wife architect team Molly and Robb Olson, and built in collaboration with Molly's father's firm, Bruce Olson Construction. At 6,601 square feet, the house is a palette of fine materials: The exterior features native split-faced granite and cedar log siding, topped with composition roofing. Indoors, the flooring is wide-plank, wire-brushed European oak, while pine logs are used for the interior siding, trusses and beams.

Custom doors and cabinetry are of sugar pine; the bathrooms are decorated with natural stone tiling and custom-crafted mirrors and fixtures.

Perfect for families, the home boasts a fireside breakfast nook and large vault-ceiling game room. A 1,141 square foot garage provides space for all the toys necessary for the Sierra lifestyle, while more than 3,500 square feet of outside living space include an expansive stone patio with fire pit and in-ground snowmelt system.

"An homage to the historic mountain architecture of the great national parks, the refined, innovative design and uncompromising selection of materials make for a modern home well-suited for the Martis Camp lifestyle," says Robb.
